

# Z87 – Anilux DeLuxe

**Z87** is a full grain, very noble aniline-nappa-leather. The naturalness, softness and two-coloured-effect, which results of a several surface-treatment, characterizes the leather. **Z87** is especially warm and soft. Because it has no coloured finish, it is very breathable, but also very sensitive to pollution. Over time it generates the "patina" typical for aniline leather.

**All natural skin-features (insect bites, scratches, creases, fighting trails, structure- and colour-differences) remain to the leather and they are specifically used for visible parts of each suite.**

These features are no reason for complaint.

Thickness:	1.3 – 1.5 mm
Dyeing method:	aniline leather refined / micro pigmented
Care kit:	KERALUX® leather care kit A
Easy-careness:	★★
Naturalness:	★★★★★
Natural characteristics:	★★★
Light fastness:	★★
Even structure and colour:	★
Sitting atmosphere, warmth, softness:	★★★★★

★ – low, ★★★★★ – excellent

## About aniline leather

These exclusive leathers have a very soft, warm, pleasant and extremely breathable surface. The dye is not just on the surface, but penetrates into the leather. The beauty of this leather comes from its slight refinement. Another special feature is that it adapts wonderfully to your body heat.

## Cleaning & Care

Dust your furniture regularly with a damp, lint-free cotton cloth – **never use with a microfibre cloth**. Immediately wipe up spilt liquids with a dry cloth – do not rub. Any remaining grease stains will gradually be absorbed by the leather – please do not do anything else! Treat with special care products (use-oriented) from time to time as instructed. Upholstered furniture must not be treated with commercially available cleaners, as this (almost) always contains silicones and waxes. We recommend treating with the **KERALUX® Sortiment A** which you can buy at [www.schillig-moebelpflege.de](http://www.schillig-moebelpflege.de).

## Leather information

Intensive sunlight and localised radiation should be avoided (will lead to fading). Staining of the material caused by clothing (e. g. jeans, not colourfast textiles/materials) does not generally constitute reasons for complaint. Processing of intensive colours (red, blue, black, dark brown etc.) in combination with light colours can lead to colour migration (this is not accepted as reasons for complaint). An incorrect care product can in certain circumstances cause serious damage. Grains, pigment faults as well as structure and colour differences are natural features and are used to the full extent. They can be found in all parts of your sofa (seat, back, side part) and will not be recognised as a complaint (in the back part also brands are used). Also different fibre structures and colour variations within the leather pieces and the suite, stronger whitening of the leather as well as crease formation on seat and backrest and further processing characteristics are no reason for complaint as well, because they are unavoidable. These are attributes of a natural aniline-leather. We can't guarantee a 100% delivery from colour sample, because even within the leather load there can be considerable colour differences.

Please pass this information on to your customer.
